TSU: Single Tube System

Features

Introducing the Prolyte TSU System – the ultimate modular solution for limitless design possibilities.

This fully flexible, single-tube system includes a comprehensive selection of components:

- Single Tubes
- Multi Cubes
- T Joints
- Cross Sections
- H-Frames
- Base Plates

Technical Specifications – TSU System

Types	Round tubes
Alloy	EN AW 6082 T6
Main chords	48x3 mm
Coupling system	CCS6

Why Choose the Prolyte TSU System?

- **Unmatched Flexibility** – Unlock your creativity with a versatile system that adapts to any design.
- **Precision Consistency** – Designed with exact measurements to ensure seamless alignment and flawless setups.

Whether for live events, exhibitions, or unique installations, the Prolyte TSU System empowers your imagination with modular ease and professional-grade durability.

What makes this system unique?

The primary advantage of our TSU Single Tube System is that it **maintains consistent distances** between the horizontal tubes. In all systems and setups, the tubes can be adjusted in increments of 25 cm (e.g., 50, 75, 100 cm, etc.).

This feature allows for the construction of symmetrical structures with uniform suspension depths at every position.
