

## Pre-camber options

Using the BGR70 truss with pre-camber options, you can create an absolute straight truss span. A combination of lugs ranging from 0mm to 4mm can create a pre-camber effect that will result in zero deflection, despite the applied loading.

### The loading table is for regular use – without any pre-camber effect.

Intermediate values can be found by interpolating, taking the following variable values into account:

- Span
- Spacers types used
- Load applied
- Allowable deflection

More information for pre-camber options available on request at [sales@prolyte.com](mailto:sales@prolyte.com)

BGR70 - Allowable Loading																
SPAN		Uniformly Distributed Load		DEFLECTION		MAXIMUM ALLOWABLE POINT LOADS										SPAN
						Centre Single Load		Single Load Third Points		Single Load Fourth Points		Single Load Fifth Points				
m	ft	kg/m	lbs/ft	mm	inch	CPL		DEFLECTION		TPL		QPL		FPL		total weight
						kg	lbs	mm	inch	kg	lbs	kg	lbs	kg	lbs

1 inch = 25,4 mm | 1m = 3.28 ft | 1 lbs = 0,453 kg

- Loading figures are only valid for static loads.
- Loading figures are only valid for single spans with supports at both ends.
- All static systems, other than single spans, need an individual structural calculation. Please contact a structural engineer or Prolyte Group for assistance.
- Loading figures are calculated according to and in full compliance with European standards (Eurocode).
- The self-weight of the trusses is already taken into account.
- Loading figures are only valid for the cross sectional orientation of the truss as shown by the icon in the loading table.
- The interaction between bending moment and shear force at the connection point is already taken into account.
- Truss spans can be assembled from different truss lengths.
- Read the manual before assembling, using and loading the truss.
